Summary

Backend-focused fullstack blockchain engineer, with a rich portfolio of decentralized systems development. Experienced leading high-impact projects requiring a deep understanding of business and technical dimensions.

Winner of ETHIndia 2024, coauthor of ERC7518 (for globally compliant RWA Tokenization), built the first ERC4337 Account Abstraction multichain wallet, and developed core infrastructure for EIP7702 and EIP2771 meta-transaction relayers.

Experience

thirdweb / Software Engineer

July 2024 - Present, Remote/SF

<https://thirdweb.com/>

Working in the Devtools team, leading development on the [engine](#) product ([github](#)). Engine is a rust based open-source, backend service with an HTTP interface that provides production-ready high-throughput capabilities to read, write, and deploy contracts on the blockchain, compatible with EVM and Solana. [[technical summary](#)]

Designed and developed [Vault](#), a rust based open-source non-custodial key management service, secured with TEE architecture (AWS Nitro Enclaves) and designed for blockchain applications.

Zoniqx (prev TASSETS) / Lead Architect

July 2022 - June 2024, Hyderabad/Remote

<https://tassets.com/>

Led development of flagship products Heimdall (an enterprise multitenant operational layer for web3) and CompliTO (a system for deterministic globally compliant security token transfers, solving fundamental problems using key cryptography primitives).

Authored [ERC7518](#) standard for dynamically compliant security tokens (draft stage).

Led a comprehensive overhaul of our core blockchain application and services, architecting a cutting-edge state-of-the-art modular, scalable solution designed for enterprise-grade deployment. This initiative significantly enhanced system performance, maintainability, and adaptability to evolving business needs and technological advancements.

Biconomy / Software Engineer

November 2021 - May 2022, Dubai/Remote

<https://biconomy.io/>

Worked as a fullstack blockchain developer. Built and shipped 3 new platforms from scratch in 3 months. Worked with React and ethers to interact with contracts.

Experience

Led architecture and design in the revamp of gasless infrastructure using

microservices, processing millions of transactions and used by clients like JP Morgan. Also led the development of the new gasless SDK to reduce developer onboarding friction.

Built the first multichain ERC4337 (Account Abstraction) based smart contract wallet in the world as a POC over a weekend-long hackathon.

Libertas Network TLD / Senior Fullstack Developer

March 2021 - November 2021, London/Remote

<https://libertas.network/>

Designed and built a scalable decentralized and censorship-resistant audio hosting and streaming system using IPFS, Node, FFMPEG, React, and Ethereum. Worked on and led product development and the 2021Q1 launch.

Freelancing

September 2017 - July 2020

Worked with various startups (SiaSkynet, Medacle, Munhive).

Stacks

Backend Development

Rust, TypeScript, GraphQL, Mediasoup, Redis, RabbitMQ, Kafka, PostgreSQL, MongoDB, Google Firestore, SQLite, Redis

Frontend Development

React with TypeScript, Tailwind, Tanstack, Zustand, NextJS, Chrome Extension Development

Web3

Solidity, Viem/Ethers/Web3, wagmi, ERC4337, EIP2771
Ethereum and EVM Chains, L2 Scaling, Rollups, Hyperledger, R3 Corda
FHE (fhEVM),

Native Development

React Native, Electron, Flutter

Awards

ETHIndia 2024 Winner

December 2024 (<https://devfolio.co/projects/zkrail-5702>)

KVPY-SA Fellowship

November 2019

National Talent Search Scholarship (NTSE)

February 2019
